- 1996). The authors also found that the frequency of use of the Internet was positively related to the frequency of use of the telephone and the frequency of use of the fax machine. This finding is consistent with the idea that the Internet is being used as a replacement for other forms of communication. However, the authors also found that the frequency of use of the Internet was negatively related to the frequency of use of the telephone and the frequency of use of the fax machine. This finding is consistent with the idea that the Internet is being used as a complement to other forms of communication.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–2000) and is projected to increase by a further 1.5 million by 2020 (Office of National Statistics 2001). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 in the USA (U.S. Census Bureau 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The ageing population is a heterogeneous group with a wide range of needs. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system.

The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system.

The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system.

The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system.

The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system.

The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system.

The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system.

The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system. The needs of the ageing population are not homogeneous and are not necessarily met by the current health care system.
